

Start here for each tree

1. If the crown area (caYYYY in the table where YYYY is the four-digit year) drops from greater than 1 square meter in 2013 to less than 1 square meter in 2017, 2018, and 2019, label live = 0, certainty = 1. **Next tree.**
2. Otherwise, if a quarter or more of the polygon is taken up by road, ground, or part of another tree, label the tree with live = -1, certainty = 0 (use canopy height from 2017 when unclear). **Next tree.**
3. If neither of the two above scenarios apply, continue to the flowchart below.
